social studies for fifth graders: *Journey in Learning and Teaching Science* Dr. Sondra Barber Akins, 2024-02-06 The author tells her life story through journals and real life vignettes written in the first person. She describes her experiences while growing up in a segregated, mid-twentieth century African American community. Nurturing relationships and activities in her working class African American home, learning in segregated African American schools, and strong connections between her home, schools, and other community institutions are described. Family history and customs, community characteristics, and socio-economic and political circumstances and events that affected her early life and her upbringing are described. Included in her story are prominent people, places, events, and circumstances that facilitated her holistic development from early childhood through adolescence. Readers will be able to infer how all the above factors and enriched learning activities in and outside of school resulted in her a positive self-image and outlook on life as well as her determination to pursue chemistry studies in challenging higher education institutions. Throughout the book the author provides commentary in which she explicitly connects her early life with events and experiences (academic, professional, and personal family life) that occurred along her journey in later years.

social studies for fifth graders: *Towards an Understanding of Kurdistan Memory Culture* Bareez Majid, 2023-12-20 This book presents a thorough analysis of the Kurdistan Region of Iraq's memory culture, focusing particularly on commemorations and representations of the Anfal and Halabja atrocities. The author employs a transdisciplinary approach that draws on Memory Studies, Postcolonial Studies, Heritage Studies, Kurdish Studies, Literary Studies and Trauma Studies, to analyze cultural objects such as Kurdistan literary novels, museums, and school curricula. The book introduces two key concepts: the phantomic museum and the apostrophic museum. The former explores the fragile and politicized nature of memories of missing individuals who disappeared during Saddam Hussein's genocidal campaigns and who have never been found, primarily as they return in the Halabja Monument and Peace Museum. The latter examines how the addressing - apostrophizing - of Kurdistan, in and by the Amna Suraka museum in the city of Sulaymaniyah, institutionalizes "official" and highly politicized versions of the past.

social studies for fifth graders: *Teaching History for the Common Good* Keith C. Barton, Linda S. Levstik, 2004-07-13 In *Teaching History for the Common Good*, Barton and Levstik present a clear overview of competing ideas among educators, historians, politicians, and the public about the nature and purpose of teaching history, and they evaluate these debates in light of current research on students' historical thinking. In many cases, disagreements about what should be taught to the nation's children and how it should be presented reflect fundamental differences that will not easily be resolved. A central premise of this book, though, is that systematic theory and research can play an important role in such debates by providing evidence of how students think, how their ideas

interact with the information they encounter both in school and out, and how these ideas differ across contexts. Such evidence is needed as an alternative to the untested assumptions that plague so many discussions of history education. The authors review research on students' historical thinking and set it in the theoretical context of mediated action--an approach that calls attention to the concrete actions that people undertake, the human agents responsible for such actions, the cultural tools that aid and constrain them, their purposes, and their social contexts. They explain how this theory allows educators to address the breadth of practices, settings, purposes, and tools that influence students' developing understanding of the past, as well as how it provides an alternative to the academic discipline of history as a way of making decisions about teaching and learning the subject in schools. Beyond simply describing the factors that influence students' thinking, Barton and Levstik evaluate their implications for historical understanding and civic engagement. They base these evaluations not on the disciplinary study of history, but on the purpose of social education--preparing students for participation in a pluralist democracy. Their ultimate concern is how history can help citizens engage in collaboration toward the common good. In *Teaching History for the Common Good*, Barton and Levstik: *discuss the contribution of theory and research, explain the theory of mediated action and how it guides their analysis, and describe research on children's (and adults') knowledge of and interest in history; *lay out a vision of pluralist, participatory democracy and its relationship to the humanistic study of history as a basis for evaluating the perspectives on the past that influence students' learning; *explore four principal stances toward history (identification, analysis, moral response, and exhibition), review research on the extent to which children and adolescents understand and accept each of these, and examine how the stances might contribute to--or detract from--participation in a pluralist democracy; *address six of the principal tools of history (narrative structure, stories of individual achievement and motivation, national narratives, inquiry, empathy as perspective-taking, and empathy as caring); and *review research and conventional wisdom on teachers' knowledge and practice, and argue that for teachers to embrace investigative, multi-perspectival approaches to history they need more than knowledge of content and pedagogy, they need a guiding purpose that can be fulfilled only by these approaches--and preparation for participatory democracy provides such purpose. *Teaching History for the Common Good* is essential reading for history and social studies professionals, researchers, teacher educators, and students, as well as for policymakers, parents, and members of the general public who are interested in history education or in students' thinking and learning about the subject.
