mathematical sciences building ucla: University Sheepdog in Westwood, L.A. Terrence Duren, 2016-08-18 Retired UCLA Police Officer, Terrence Duren, at the center of the 2006 UCLA Taser Incident, writes his memoir, "University Sheepdog in Westwood, Los Angeles to set the record straight regarding his life and law enforcement career. There were television news reports and articles written about the Taser incident and of Terrence Duren's past. Some of these news reports and articles were unflattering and did not paint a complete picture of him and other officers involved in the Taser incident. In addition to the protests held at UCLA and other UC campuses, there were high volume of telephone calls to UCLA with people voicing their anger and support over the Taser incident. These telephone calls came from people living in the United States and abroad. There was such a high volume of phone calls that UCLA's telecommunications nearly broke down. After a complete and thorough investigation, the UCLA police chief as well as UCLA campus administrators, concluded that Officer Duren did not violate policy with his use of the Taser. University sheepdog in Westwood, Los Angeles is a memoir that gives a better understanding of Officer Terrence Duren and his former colleagues. This memoir is a story of Sheepdogs (police officers), protecting the Sheep (students\faculty\staff\visitors and others), from the Wolves (criminals). Some of the contents in this memoir will tell of Terrence Duren's Officer Involved Shootings, on and off campus, his working undercover for six months buying narcotics from UCLA hospital employees, his confrontation with members of the Nation of Islam, his SWAT standoff with an armed suspect, lewd and lascivious

activity in the men's restrooms, his mentoring victims and suspects, flimflammer, and more! Additionally, this Memoir has contents regarding Terrence's childhood growing up around Black Panthers, his service in the United States Marine Corps in peace time and during the First Gulf War. This memoir is unlike any other police story ever told. As you read this memoir, sit down and strap up because you are about to go on a ride!

mathematical sciences building ucla: Case Studies in Spatial Point Process Modeling Adrian Baddeley, Pablo Gregori, Jorge Mateu Mahiques, Radu Stoica, Dietrich Stoyan, 2006-03-03 Point process statistics is successfully used in fields such as material science, human epidemiology, social sciences, animal epidemiology, biology, and seismology. Its further application depends greatly on good software and instructive case studies that show the way to successful work. This book satisfies this need by a presentation of the spatstat package and many statistical examples. Researchers, spatial statisticians and scientists from biology, geosciences, materials sciences and other fields will use this book as a helpful guide to the application of point process statistics. No other book presents so many well-founded point process case studies. From the reviews: For those interested in analyzing their spatial data, the wide variety of examples and approaches here give a good idea of the possibilities and suggest reasonable paths to explore. Michael Sherman for the Journal of the American Statistical Association, December 2006

mathematical sciences building ucla: Storage Systems Alexander Thomasian, 2021-10-13 Storage Systems: Organization, Performance, Coding, Reliability and Their Data Processing was motivated by the 1988 Redundant Array of Inexpensive/Independent Disks proposal to replace large form factor mainframe disks with an array of commodity disks. Disk loads are balanced by striping data into strips—with one strip per disk—and storage reliability is enhanced via replication or erasure coding, which at best dedicates k strips per stripe to tolerate k disk failures. Flash memories have resulted in a paradigm shift with Solid State Drives (SSDs) replacing Hard Disk Drives (HDDs) for high performance applications. RAID and Flash have resulted in the emergence of new storage companies, namely EMC, NetApp, SanDisk, and Purestorage, and a multibillion-dollar storage market. Key new conferences and publications are reviewed in this book. The goal of the book is to expose students, researchers, and IT professionals to the more important developments in storage systems, while covering the evolution of storage technologies, traditional and novel databases, and novel sources of data. We describe several prototypes: FAWN at CMU, RAMCloud at Stanford, and Lightstore at MIT; Oracle's Exadata, AWS' Aurora, Alibaba's PolarDB, Fungible Data Center; and author's paper designs for cloud storage, namely heterogeneous disk arrays and hierarchical RAID. - Surveys storage technologies and lists sources of data: measurements, text, audio, images, and video - Familiarizes with paradigms to improve performance: caching, prefetching, log-structured file systems, and merge-trees (LSMs) - Describes RAID organizations and analyzes their performance

and reliability - Conserves storage via data compression, deduplication, compaction, and secures data via encryption - Specifies implications of storage technologies on performance and power consumption - Exemplifies database parallelism for big data, analytics, deep learning via multicore CPUs, GPUs, FPGAs, and ASICs, e.g., Google's Tensor Processing Units

mathematical sciences building ucla: University Planning and Architecture Jonathan Coulson, Paul Roberts, Isabelle Taylor, 2010-09-23 The environment of a university – what we term a campus – has long been the setting for some of history's most exciting experiments in the design of the built environment. Christopher Wren at Cambridge, Thomas Jefferson at Virginia, Le Corbusier at Harvard, Louis Kahn at Yale and Norman Foster in Berlin: the calibre of practitioners that have worked for universities is astounding. This book comprehensively documents the worldwide evolution of university design from the Middle Ages to the present day, uncovering the key developments which have shaken the world of campus planning. A series of detailed and highly illustrated case-studies profile universally acclaimed campuses that, through their planning, architecture and landscaping, have succeeded in making positive contributions to the field. Drawing on these examples, the book turns to the strategies behind campus planning in today's climate. Exploring the importance of themes such as landscape, architecture, place-making and sustainability within university development, the book consolidates the lessons learnt from the rich tradition of campus development to provide a 'good practice guide' for anyone concerned with planning environments for higher education

This hampers co-operation and data exchange, hampering the acquisition of strong motion and structural data, sometimes even within a single country. There is a powerful need to inform engineers of existing strong motion data and to improve the accessibility of data worldwide. This book will play a role in fulfilling such a need by disseminating state-of-the art information, technology and developments in the strong motion instrumentation of civil engineering structures. The subject has direct implications for the earthquake response of structures, improvements in design for earthquake resistance, and hazard mitigation. Readership: Researchers in earthquake engineering, engineers designing earthquake resistant structures, and producers of strong motion recording equipment.

How we feel, how productive we are, even our sheer existence, depends on these three things. The United States' economic activity varies annually by 1.7% due to weather—that is more than \$500 billion dollars each year. Weather applications on mobile devices are the second most popular apps—more popular than social networking, maps, music, and news. In *Treading on Thin Air*, Dr. Elizabeth Austin, a world-renowned atmospheric physicist, reveals how the climate is intimately tied to our daily lives. The effects and impacts of weather on humans, society and the planet are changing with the times. Dr. Austin will demystify climate change, revealing what is really happening with our climate and why, whether it is El Nino, tornadoes, floods or hurricanes. Weather and society are at its most fascinating at extremes, and as Dr. Austin is one of a handful of forensic meteorologists around the globe. She has been called upon to investigate plane crashes, murders, wildfires, avalanches, even bombing cases. Drawing upon her rich experiences, Austin's *Treading on Thin Air* promises to be an enlightening and informative journey through the wild word of weather.
