glencoe biology teacher edition: *Learning and Sustaining Agricultural Practices* Karen Haydock, Abhijit Sambhaji Bansode, Gurinder Singh, Kalpana Sangale, 2021-03-26 This book describes a participatory case study of a small family farm in Maharashtra, India. It is a dialectical study of cultivating cultivation: how paddy cultivation is learnt and taught, and why it is the way it is. The paddy cultivation that the family is doing at first appears to be 'traditional'. But by observation and working along with the family, the authors have found that they are engaging in a dynamic process in which they are questioning, investigating, and learning by doing. The authors compare this to the process of doing science, and to the sort of learning that occurs in formal education. The book presents evidence that paddy cultivation has always been varying and evolving through chance and necessity, experimentation, and economic contingencies. Through the example of one farm, the book provides a critique of current attempts to sustain agriculture, and an understanding of the ongoing agricultural crisis.

glencoe biology teacher edition: *The Nature of Race* Ann Morning, 2011-06-24 What do Americans think race means? What determines one's race—appearance, ancestry, genes, or culture? How do education, government, and business influence our views on race? To unravel these complex questions, Ann Morning takes a close look at how scientists are influencing ideas about race through teaching and textbooks. Drawing from in-depth interviews with biologists, anthropologists, and undergraduates, Morning explores different conceptions of race—finding for example, that while many sociologists now assume that race is a social invention or construct, anthropologists and biologists are far from such a consensus. She discusses powerful new genetic accounts of race, and considers how corporations and the government use scientific research—for example, in designing DNA ancestry tests or census questionnaires—in ways that often reinforce the idea that race is biologically determined. Widening the debate about race beyond the pages of scholarly journals, *The Nature of Race* dissects competing definitions in straightforward language to reveal the logic and assumptions underpinning today's claims about human difference.
