connect access card mcgraw hill: The Blended Course Design Workbook Kathryn E. Linder, 2023-07-03 Blended (also called hybrid) classrooms, in which face-to-face interaction is intentionally combined with online activities to aid student learning, are becoming more and more common. Most recently, "flipped" classrooms have become a popular method for teaching because more time for active learning in-class can be gained by moving content delivery such as lecture to outside-of-class homework using technology tools such as video or lecture capture. The blended model is proving to be an environment that provides more self-directed, technology-mediated

learning experiences for students who will be incorporating technology more and more into their professional lives post-college. The Blended Course Design Workbook meets the need for a user-friendly resource that provides faculty members and administrators with instructions, activities, tools, templates, and deadlines to guide them through the process of revising their traditional face-to-face course into a blended format. Providing a step-by-step course design process that emphasizes active learning and student engagement, this book will help instructors adapt traditional face-to-face courses to a blended environment by guiding them through the development of course goals and learning objectives, assignments, assessments, and student support mechanisms with technology integration in mind. It will also help instructors choose the right technologies based on an instructor's comfort level with technology and their specific pedagogical needs. The book will help each instructor who uses the text to develop a unique course by making choices about their course design based on student learning needs for their chosen topic and discipline. Every component of the workbook has been piloted with faculty designing and implementing blended courses and then revised to better meet the needs of faculty across a range of comfort levels with technology use. The Blended Course Design Workbook includes detailed instructions for each stage of course design alongside specific activities that the reader can complete. The book is unique because it facilitates a step-by-step process for blended course design with specific templates and tools that can be used across disciplines.

connect access card mcgraw hill: Link Adaptation for Relay-Based Cellular Networks Basak Can, 2022-09-01 Cover Text Link Adaptation for Relay-Based Cellular Networks focuses on the implementation of various link adaptation methods in OFDM(A) (Orthogonal Frequency Division Multiplexing/Multiple Access)?Time Division Duplex (TDD) based two-hop cellular networks. The analysis and design consider infrastructure based relays. New link adaptive transmission methods which dynamically select the channel coding, modulation, forwarding, relaying mechanisms and the

packet size have been designed and evaluated for such networks. The selection among various schemes is based on maximizing the end-to-end throughput. This book provides a channel adaptive scheduler which considers the multiplexing loss caused by the two-phase nature of wireless relaying. The scheduler dynamically schedules the users on the frequency-time radio resources with efficient Modulation and Coding Schemes (MCS)s selected by Adaptive Modulation and Coding (AMC). Relaying is used only if it can provide throughput enhancement. The guidelines for efficient deployment of infrastructure based relay terminals are given. For the two-hop cellular communication systems, the system level performance of various cooperative diversity schemes has been investigated with the scheduler developed and the relays efficiently deployed in the cell. This investigation for low mobility scenarios shows that, a simple cooperative diversity scheme that dynamically chooses the best scheme among direct transmission and two-hop conventional relaying is a promising choice when compared to various more complex cooperative diversity schemes. In this book, a hop adaptive Medium Access Control (MAC)-Protocol Data Unit (PDU) size optimization is proposed for wireless relay networks.

connect access card mcgraw hill: Ownership and Governance of Companies Jonathan Michie, Vishnu Padayachee, 2021-06-29 Apartheid South Africa was often thought to run in the interests of the business elite. Yet 27 years after apartheid, those business interests remain largely entrenched. Why? Did the South African business community play a role in engineering this outcome – perhaps recognising the apartheid era was over, and jumping ship in time? Conversely, the mission of the ANC was widely perceived to be to shift wealth and power into the hands of the whole community. Yet despite 'black empowerment' measures, corporate ownership remains largely in white hands – and certainly in the hands of an elite few, even though no longer restricted to whites. This picture is replicated across the global south, where corporate ownership tends to be concentrated in the hands of an elite, rather than being more democratically spread. Why have alternative corporate forms not been pursued more vigorously, with ownership in the hands of customers, employees, and local communities? In the case of South Africa, where the majority of customers and employees are black, this could have delivered on the ANC's mission to replace the apartheid era with a democratic one – in terms of wealth, incomes and power, as well as in terms of voting and civic rights. This edited volume explores all these questions and looks at ways to align corporate forms with economic and social goals. The chapters in this book were originally published as special issues of International Review of Applied Economics.
