10 photos that changed the world: Black Meme Legacy Russell, 2024-05-07 In BLACK MEME, Legacy Russell, awardwinning author of the groundbreaking GLITCH FEMINISM, explores the meme as mapped to Black visual culture from 1900 to the present, mining both archival and contemporary media. Russell argues that without the contributions of Black people, digital culture would not exist in its current form. These meditations include the circulation of lynching postcards; why a mother allowed JET magazine to publish a picture of her dead son, Emmett Till; and how the televised broadcast of protesters in Selma changed the debate on civil rights. Questions of the media representation of Blackness come to the fore as Russell considers how citizen-recorded footage of the LAPD beating Rodney King became the first viral video. Why the Anita Hill hearings shed light on the media's creation of the Black icon. The ownership of Black imagery and death is considered in the story of Tamara Lanier's fight to reclaim the daguerreotypes of her enslaved ancestors from Harvard. Meanwhile the live broadcast on Facebook of the murder of Philando Castile by the police after he was stopped for a broken taillight forces us to bear witness to the persistent legacy of the Black meme. Through imagery, memory, and technology, BLACK MEME shows us how images of Blackness have always been central to our understanding of the modern world.

10 photos that changed the world: The Violence of the Image Liam Kennedy, Caitlin Patrick, 2020-09-13 Photography has visualized international relations and conflicts from the midnineteenth century onwards and continues to be an important medium in framing the worlds of distant, suffering others. Although photojournalism has been challenged in recent decades, claims that it is dead are premature. The Violence of the Image examines the roles of image producers and the functions of photographic imagery in the documentation of wars, violent conflicts and human rights issues; tackling controversial ideas such as 'witnessing', the making of appeals based on displays of human suffering and the much-cited concept of 'compassion fatigue'. In the twenty-first century, the advent of digital photography, camera phones and socialmedia platforms has altered the relationship between photographers, the medium and the audience- as well as contributing to an ongoing blurring of the boundaries between news and entertainment and professional and amateur journalism. The Violence of the Image explores how new vernacular and artistic modes of photographic production articulate international friction. This innovative, timely book makes a major contribution to discussions about the power of the image in conflict.

10 photos that changed the world: Reporting War Stuart Allan, Barbie Zelizer, 2004 Reporting War explores the social responsibilities of the journalist during times of military conflict. News media treatments of international crises, especially the one underway in Iraq, are increasingly becoming the subject of public controversy, and discussion is urgently needed. Each of this book's contributors challenges familiar assumptions about war reporting from a distinctive perspective. An array of pressing issues associated with conflicts over recent years are identified and critiqued, always with an eye to what they can tell us about improving journalism today. Special attention is devoted to recent changes in journalistic forms and practices, and the ways in which they are

shaping the visual culture of war, and issues discussed, amongst many, include: the influence of censorship and propaganda 'us' and 'them' news narratives access to sources '24/7 rolling news' and the 'CNN effect' military jargon (such as 'friendly fire' and 'collateral damage') 'embedded' and 'unilateral' reporters tensions between objectivity and patriotism. The book raises important questions about the very future of journalism during wartime, questions which demand public dialogue and debate, and is essential reading for students taking courses in news and news journalism, as well as for researchers, teachers and practitioners in the field.

10 photos that changed the world: About to Die Barbie Zelizer, 2010-12-01 Due to its ability to freeze a moment in time, the photo is a uniquely powerful device for ordering and understanding the world. But when an image depicts complex, ambiguous, or controversial events--terrorist attacks, wars, political assassinations--its ability to influence perception can prove deeply unsettling. Are we really seeing the world as it is or is the image a fabrication or projection? How do a photo's content and form shape a viewer's impressions? What do such images contribute to historical memory? About to Die focuses on one emotionally charged category of news photograph--depictions of individuals who are facing imminent death--as a prism for addressing such vital questions. Tracking events as wide-ranging as the 1906 San Francisco Earthquake, the Holocaust, the Vietnam War, and 9/11, Barbie Zelizer demonstrates that modes of journalistic depiction and the power of the image are immense cultural forces that are still far from understood. Through a survey of a century of photojournalism, including close analysis of over sixty photos, About to Die provides a framework and vocabulary for understanding the news imagery that so profoundly shapes our view of the world.
