mcgraw hill world history and geography online textbook: Mapping Latin America Jordana Dym, Karl Offen, 2011-12-01 For many, a map is nothing more than a tool used to determine the location or distribution of something—a country, a city, or a natural resource. But maps reveal much more: to really read a map means to examine what it shows and what it doesn't, and to ask who made it, why, and for whom. The contributors to this new volume ask these sorts of questions about maps of Latin America, and in doing so illuminate the ways cartography has helped to shape this region from the Rio Grande to Patagonia. In *Mapping Latin America*, Jordana Dym and Karl Offen bring together scholars from a wide range of disciplines to examine and interpret more than five centuries of Latin American maps. Individual chapters take on maps of every size and scale and from a wide variety of mapmakers—from the hand-drawn maps of Native Americans, to those by famed explorers such as Alexander von Humboldt, to those produced in today's newspapers and magazines for the general public. The maps collected here, and the interpretations that accompany them, provide an excellent source to help readers better understand how Latin American countries,

regions, provinces, and municipalities came to be defined, measured, organized, occupied, settled, disputed, and understood—that is, how they came to have specific meanings to specific people at specific moments in time. The first book to deal with the broad sweep of mapping activities across Latin America, this lavishly illustrated volume will be required reading for students and scholars of geography and Latin American history, and anyone interested in understanding the significance of maps in human cultures and societies.

mcgraw hill world history and geography online textbook: An Introduction to the Geography of Health Helen Hazen, Peter Anthamatten, 2012-05-23 Health issues such as the emergence of infectious diseases, the potential influence of global warming on human health, and the escalating strain of increasing longevity and chronic conditions on healthcare systems are of growing importance in an increasingly peopled and interconnected world. A geographic approach to the study of health offers a critical perspective to these issues, considering how changing relationships between people and their environments influence human health. An Introduction to the Geography of Health provides an accessible introduction to this rapidly growing field, covering theoretical and methodological background. The text is divided into three sections which consider distinct approaches and techniques related to health geographies. Section one introduces ecological approaches, with a focus on how natural and built environments affect human health. For instance, how have irrigation projects influenced the spread of water-borne diseases? How can modern healthcare settings, such as hospitals, affect the spread and evolution of pathogens? Section two discusses social aspects of health and healthcare, considering health as not merely a biological interaction between a pathogen and human host, but as a process that is situated among social factors which ultimately drive who suffers from what, and where disease occurs. Section three then considers spatial techniques and approaches to exploring health, giving special focus to the growing role of cartography and geographic information systems (GIS) in the study of health. This clearly written text contains a range of pedagogical features including a wealth of global case studies, discussion questions and suggestions for further reading at the end of each chapter, a colour plate section and over eighty diagrams and figures. The accompanying website also provides presentations, exercises, further resources, and tables and figures. This book is an essential introductory text for undergraduate students studying Geography, Health and Social Studies.

mcgraw hill world history and geography online textbook: *Puritan Islam* Barry A. Vann, 2011-09-27 In this unique analysis of Muslim population shifts in the Western world, geographer

Barry A. Vann provides fresh insights into the theological factors that play into these demographic trends. Vann examines the “imagined geographies” of Muslims with a puritan orientation. People with this mind-set are little inclined to accept a pluralistic, multicultural, live-and-let-live concept of society. And conflicts between conflicting value systems are almost inevitable. Vann notes that this purist approach to Islam is certainly not universal among Muslims, and there are many varying interpretations that are more moderate in outlook. Nonetheless, the undeniable theological background of all Muslim communities colors their values and attitudes, and must be taken into consideration when attempting to understand the potential conflicts between contiguous Muslim and non-Muslim groups. Given the fact that the population of Muslim immigrants is growing in traditionally Christian and increasingly secular countries of the Western world while the resident populations are either stagnant or declining, Vann’s insightful analysis of the ways in which Islam influences perceptions of community and geography is of great relevance.

mcgraw hill world history and geography online textbook: Tracing Your Baltic, Scandinavian, Eastern European, & Middle Eastern Ancestry Online Anne Hart, 2005-06-06 Are you online and ready for global smart card and database genealogy for virtual travelers? Here's how to search family history for nations bordering the Baltic Sea, the Balkans countries, Scandinavia, Eastern Europe, and the Middle East. The nations listed in this guide (all faiths) include Finland, Sweden, Norway, Denmark, Iceland, Estonia, Latvia, Lithuania, Poland, Armenia, Assyria, Greece, Lebanon, Syria, and many other lands in the Middle East, the Balkans-Croatia, Macedonia, Bulgaria, Eastern Europe-Hungary, and more. Collecting details about people is moving toward smart card technology and its offspring. The new wave in genealogy is authentication technology. Authentication begins with new-wave technology used to gather population registers. Compare the new technology to the old method of door-to-door census taking, tombstone tracings, and city directory publishing. No, genealogists are not using smart cards this year, but smart card technology is being used to compile population registers in Europe. The future holds a new wave of technology used for authentication for banking transactions being applied to other areas. Currently this technology is used for collecting details for population registrars such as census taking. The application for research is of interest to family historians, librarians, and governments. It's already in use by private industry for electronic authentication. Family history is now about intelligent connections, whether it's a population registrar, census detail, or electronic identity for banking. Smart card genealogy began in 1998 in Finland with governments seeking to put census and population registers in an electronic form that would be available to researchers, and these applications are going global.

mcgraw hill world history and geography online textbook: Gender and Climate Change Joane Nagel, 2025-08-05 Does gender matter in global climate change? This timely and provocative book takes readers on a guided tour of basic climate science, then holds up a gender lens to find out what has been overlooked in popular discussion, research, and policy debates. We see that, around the world, more women than men die in climate-related natural disasters; the history of science and war are intimately interwoven masculine occupations and preoccupations; and conservative men and their interests drive the climate change denial machine. We also see that climate policymakers who embrace big science approaches and solutions to climate change are predominantly male with an ideology of perpetual economic growth, and an agenda that marginalizes the interests of women and developing economies. The book uses vivid case studies to highlight the often surprising, gendered impacts of climate changes. This new edition is a thorough update that includes revised and new chapters and new material that takes account of the significant advances in climate research, environmental and social theory, and the many political and social challenges posed in the wake of US elections, Covid-19 pandemic, and rapidly changing climate and environment. The new edition also takes account of important social and cultural movements that resist challenges to women’s rights and advocate for gender, sexuality, and racial justice. This book will appeal to students, researchers, and academicians interested in environmental studies and gender studies. It also will be of interest to policymakers, activists, and others involved with environmental policy and

governance.

Brunn, Roland Kehrein, 2023-04-08 This book addresses the changing contemporary language worlds in three major contexts. It first discusses how the language landscape maps of cities are changing as a result of increased migration, globalization and global media. These features are evident in place names and place name changes as well as the densities and frequencies of language spoken and used in texts. The second section discusses how the state itself is responding to both indigenous and heritage groups desiring to be included and represented in the state's political landscapes and also expressions of art and culture. In the third section, the authors address a number of cutting-edge theses that are emerging in the linguistic geography and political words. These include the importance of gender, anthropogenetic discourse, the preservation of endangered languages and challenges to a state's official language policy. Through including authors from nine different countries, who are writing about issues in twelve countries and their overlapping interests in language mapping, language usage and policy and visual representations, this book provides inspiring research into future topics at local, national, regional and international scales.
