

how many people die every day

How Many People Die Every Day: Understanding Global Mortality Rates

how many people die every day is a question that often comes to mind when we think about the fragility of life and the scale of human existence. It's a sobering topic but also an important one for understanding global health, population trends, and the challenges societies face. By exploring daily death rates, causes, and the factors influencing mortality, we get a clearer picture of how life and death shape our world.

Understanding How Many People Die Every Day Worldwide

On average, approximately 150,000 people die every day across the globe. This staggering number reflects the combined impact of various causes of death, ranging from natural aging processes to accidents and diseases. While it may seem overwhelming, it's essential to remember that this figure is influenced by the world's total population, which currently exceeds 8 billion.

The global death rate fluctuates slightly each year due to factors like pandemics, improvements in healthcare, conflicts, and natural disasters. For example, during the peak of the COVID-19 pandemic, daily deaths spiked significantly in many countries, highlighting how epidemics can impact mortality rates temporarily.

Why Is It Important to Know How Many People Die Every Day?

Understanding daily death rates helps governments, healthcare systems, and policymakers allocate resources effectively. It also assists epidemiologists and social scientists in tracking trends related to life expectancy, disease prevalence, and the effectiveness of medical interventions. Additionally, it provides insight into global challenges such as aging populations in some regions and high mortality rates in others.

Main Causes of Daily Deaths Globally

Not all deaths are the same, and the reasons why people die every day vary widely depending on geography, age, socioeconomic status, and healthcare access.

1. Non-Communicable Diseases (NCDs)

Non-communicable diseases, including heart disease, cancer, diabetes, and chronic respiratory diseases, account for the majority of daily deaths worldwide. These conditions often develop over years due to lifestyle factors such as poor diet, lack of exercise, smoking, and environmental

pollution. For instance, ischemic heart disease alone is responsible for millions of deaths annually, contributing significantly to the daily mortality count.

2. Infectious Diseases

While NCDs dominate in many developed countries, infectious diseases remain a leading cause of death in lower-income regions. Diseases like tuberculosis, malaria, HIV/AIDS, and respiratory infections such as pneumonia cause thousands of deaths each day, particularly in sub-Saharan Africa and parts of Asia. The COVID-19 pandemic also underscored how viral outbreaks can dramatically affect daily death rates worldwide.

3. Accidents and Injuries

Unintentional injuries, including road traffic accidents, falls, drownings, and poisonings, contribute significantly to daily mortality, especially among younger populations. According to the World Health Organization, road traffic accidents alone cause over 1.3 million deaths annually, translating to roughly 3,500 deaths per day globally.

4. Maternal and Infant Mortality

Tragically, complications during pregnancy and childbirth remain a cause of death for many women and infants in developing countries. Although progress has been made to reduce maternal and infant mortality rates, challenges related to access to quality healthcare and nutrition persist, contributing to the daily death toll.

Regional Variations in Daily Death Rates

The number of people who die every day varies greatly depending on the region, reflecting differences in population size, health infrastructure, and socioeconomic conditions.

High Mortality Regions

Sub-Saharan Africa and parts of South Asia have higher daily death rates due to infectious diseases, malnutrition, and limited healthcare access. For example, malaria and HIV/AIDS cause a disproportionate number of deaths in these areas compared to wealthier regions.

Lower Mortality Regions

Countries with advanced healthcare systems like Japan, Canada, and much of Western Europe tend to

have lower daily death rates relative to their population sizes. Here, chronic diseases like heart conditions and cancer are more common causes of death, but improved medical care helps extend life expectancy and reduce premature mortality.

How Daily Death Rates Affect Population Growth

Every day, the balance between births and deaths determines whether a population grows, shrinks, or remains stable. In many developing countries, high birth rates combined with declining death rates lead to rapid population growth. Conversely, several developed nations face population decline due to low birth rates and aging populations despite relatively low daily death numbers.

Understanding how many people die every day is crucial for planning infrastructure, social services, and economic policies. For instance, countries experiencing a surge in elderly populations must prepare for increased healthcare demands and retirement support systems.

The Role of Life Expectancy

Life expectancy is closely tied to daily death statistics. As global life expectancy increases due to medical advancements and better living conditions, the average age at death rises, even if the total number of daily deaths remains high due to population size. This shift affects how societies prioritize healthcare and social support.

How Can We Reduce the Number of Daily Deaths?

While death is an inevitable part of life, many daily deaths are preventable. Efforts to reduce mortality focus largely on improving healthcare, promoting healthy lifestyles, and preventing accidents.

Improving Healthcare Access

Expanding access to quality medical care, vaccinations, and maternal health services can drastically reduce deaths caused by preventable diseases and complications. For example, immunization programs have saved millions of lives by preventing diseases like measles and polio.

Promoting Healthy Living

Public health campaigns encouraging balanced diets, physical activity, and smoking cessation help reduce the burden of chronic diseases. Governments and communities play vital roles in creating environments that make healthy choices easier and more accessible.

Enhancing Safety Measures

Implementing road safety laws, workplace regulations, and emergency response systems can cut down on accidental deaths. Wearing seatbelts, reducing drunk driving, and improving infrastructure are practical steps that save lives daily.

Tracking and Reporting Deaths: Challenges and Importance

Accurate data on how many people die every day is critical but can be challenging to obtain, especially in regions with limited infrastructure. Many countries lack comprehensive death registration systems, leading to underreporting or misclassification of causes of death.

International organizations like the World Health Organization and the United Nations work with governments to improve mortality data collection. Reliable statistics help identify health priorities, monitor progress, and respond effectively to emerging threats.

Technological Advances in Mortality Tracking

Digital health records, mobile reporting tools, and big data analytics are transforming how we track deaths worldwide. Real-time data collection enables quicker responses to epidemics, natural disasters, and other events that impact mortality rates.

Reflecting on the Human Aspect Behind the Numbers

While statistics provide a broad overview of mortality, each number represents a human life — a story, a family, a community affected by loss. Understanding how many people die every day invites us to appreciate the value of life and the importance of compassion, healthcare, and prevention.

It also reminds us to support efforts that improve quality of life and reduce unnecessary deaths. Whether through volunteering, advocating for health policies, or simply fostering awareness, every action contributes to a healthier, safer world.

In the end, knowledge about daily death rates offers more than just data; it provides perspective on our shared humanity and the ongoing quest to enhance life for all.

Frequently Asked Questions

How many people die every day worldwide?

Approximately 150,000 people die every day worldwide, based on current global mortality rates.

What are the leading causes of daily deaths globally?

The leading causes of daily deaths globally include heart disease, stroke, respiratory infections, chronic respiratory diseases, and cancers.

How does the number of daily deaths vary by country?

The number of daily deaths varies significantly by country depending on population size, healthcare quality, and prevalent diseases; for example, larger countries like India and China have higher daily death counts compared to smaller countries.

Has the daily death rate changed due to the COVID-19 pandemic?

Yes, the COVID-19 pandemic temporarily increased the daily death rate worldwide, especially during peak waves, due to virus-related fatalities and healthcare system strains.

How can understanding daily death statistics help public health?

Understanding daily death statistics helps public health officials identify trends, allocate resources effectively, implement preventive measures, and improve healthcare policies to reduce mortality.

Additional Resources

How Many People Die Every Day: An Analytical Perspective

how many people die every day is a question that touches upon the very fabric of human existence, mortality rates, and global population dynamics. Understanding this figure is crucial not only for demographic studies but also for public health planning, resource allocation, and policy-making. This article delves into the estimated number of daily deaths worldwide, explores the factors affecting mortality rates, and examines the implications of these figures in a broader socio-economic context.

Global Mortality: Understanding the Numbers

Estimating how many people die every day involves analyzing data from multiple sources, including national health departments, the World Health Organization (WHO), and various demographic research institutions. According to recent global health data, approximately 150,000 people die every day worldwide. This translates to over 55 million deaths annually, a number influenced by factors such as age distribution, healthcare access, and the prevalence of diseases.

The daily death toll is not uniform across regions. High-income countries often experience lower mortality rates due to advanced healthcare systems, better sanitation, and higher standards of living. Conversely, low- and middle-income countries tend to have higher death rates, influenced by infectious diseases, malnutrition, and limited medical infrastructure.

Factors Influencing Daily Mortality Rates

Several variables contribute to how many people die every day:

- **Age demographics:** Countries with older populations generally see higher daily death numbers due to age-related illnesses.
- **Healthcare quality:** Access to effective medical treatment reduces mortality from preventable and treatable conditions.
- **Disease prevalence:** Epidemics, chronic diseases, and emerging health threats impact mortality rates significantly.
- **Environmental factors:** Natural disasters, pollution, and climate change contribute to sudden spikes in death rates.
- **Socioeconomic status:** Poverty and education levels influence health outcomes and life expectancy.

Understanding these factors is essential to interpret the daily death statistics accurately and to implement targeted interventions aimed at reducing preventable deaths.

Comparing Death Rates: Historical and Contemporary Views

When exploring how many people die every day, it is insightful to consider historical trends alongside contemporary figures. In the pre-modern era, daily deaths were proportionally higher due to infectious diseases, poor nutrition, and lack of sanitation. The average life expectancy was considerably lower, resulting in higher mortality rates among all age groups.

With advances in medicine, vaccines, and public health initiatives, death rates began to decline sharply in the 20th century, particularly in developed nations. However, the global population explosion means that even with lower death rates per capita, the absolute number of daily deaths can remain substantial.

For instance, during the 1918 influenza pandemic, daily deaths skyrocketed, underscoring how pandemics and epidemics can dramatically alter mortality patterns. The recent COVID-19 pandemic similarly caused fluctuations in death rates across the globe, temporarily increasing the daily number of deaths in many countries.

Leading Causes of Death Affecting Daily Mortality

To better grasp the dynamics behind how many people die every day, it is important to analyze the

primary causes of mortality:

1. **Cardiovascular diseases:** Responsible for approximately 17.9 million deaths annually, heart diseases and strokes account for a significant portion of daily deaths worldwide.
2. **Respiratory diseases:** Chronic obstructive pulmonary disease (COPD) and lower respiratory infections contribute heavily to mortality, especially in developing nations.
3. **Infectious diseases:** Despite progress, diseases like tuberculosis, malaria, and HIV/AIDS still claim many lives daily.
4. **Neoplasms (cancers):** Cancer remains a leading cause of death, with millions succumbing each year.
5. **Accidents and injuries:** Unintentional injuries, road traffic accidents, and violence contribute significantly to daily mortality, particularly among younger populations.
6. **Emerging health threats:** New diseases and pandemics can cause sharp increases in daily death rates.

This distribution of causes highlights the multifaceted nature of mortality and the need for diverse healthcare strategies aimed at reducing preventable deaths.

Implications of Daily Death Statistics

The fact that approximately 150,000 people die worldwide every day carries profound implications for governments, healthcare systems, and societies.

Public Health and Resource Allocation

Tracking daily deaths helps identify trends and emerging health threats, allowing policymakers to allocate resources effectively. For example, recognizing increases in deaths due to respiratory illnesses may prompt investments in air quality improvements or vaccination campaigns.

Population Growth and Sustainability

Daily death rates, when juxtaposed with birth rates, inform projections about global population growth or decline. Currently, global birth rates exceed death rates, contributing to population growth. However, in some regions, deaths outnumber births, leading to population shrinkage and potential socio-economic challenges.

Emotional and Social Impact

Beyond statistics, each death represents a personal loss with emotional reverberations across families and communities. Understanding how many people die every day underscores the urgency of improving healthcare access and addressing social determinants of health.

Challenges in Data Accuracy

Despite advancements, accurately measuring daily deaths remains challenging, especially in countries with limited reporting infrastructure. Underreporting, misclassification of causes of death, and delays in data collection can skew figures, impacting global mortality estimates.

Looking Ahead: The Future of Mortality Trends

As medical technology advances and global health initiatives expand, the dynamics of how many people die every day are expected to evolve. Potential reductions in mortality from infectious diseases and improvements in chronic disease management may decrease daily deaths in some regions.

However, emerging challenges such as aging populations, antibiotic resistance, climate change-related health issues, and the threat of new pandemics may counterbalance these gains. Continuous monitoring, research, and adaptive public health policies will be vital to navigate these complexities.

In conclusion, understanding how many people die every day offers valuable insights into human health, societal progress, and the challenges that remain. It is a stark reminder of the fragility of life and the ongoing need to invest in health systems and preventive measures globally.

how many people die every day: Why People Die by Suicide Thomas Joiner, 2009-07-01 Drawing on extensive clinical and epidemiological evidence, as well as personal experience, Thomas Joiner provides the most coherent and persuasive explanation ever given of why and how people overcome life's strongest instinct, self-preservation.

how many people die every day: Every Day with Jesus Greg Laurie, 2024-07-26 Doing the same thing every day can make it seem common or ordinary. But there is nothing even remotely ordinary about a daily encounter with Jesus Christ. Walking with the living Son of God through the ups and downs and ins and outs of daily circumstances doesn't just add value to life; it completely transforms it. Seeking and finding God in the course of a normal, three-dimensional day adds a fourth dimension: eternity. In the pages of God's Word we begin to grasp an eternal perspective that changes everything we experience. It isn't like getting a new pair of glasses; it's like getting a new pair of eyes. For well over thirty years through his teaching, preaching, and numerous books, Greg Laurie has been leading people into the adventure of knowing Christ and understanding the Bible. The readings in this book will kindle a new or renewed hunger to spend time in God's Word--and

empower you to experience the life of His Son.

how many people die every day: God, Evil, and Suffering in Islam Salih Sayilgan, 2023-10-26 Provides an introduction to the problem of evil and suffering in Islamic Theology.

how many people die every day: The Map of Innovation Kevin O'Connor, Paul B. Brown, 2003-08-12 How did Kevin O'Connor help create DoubleClick, the innovative marketing technology company...two software companies...dozens of products...and now the "disappearing" DVD, a product that will turn the home video market on its head? Sheer brilliance? While O'Connor is very smart indeed, he credits his success to applying Thomas Edison's famous saying that "genius is one percent inspiration and ninety-nine percent perspiration." In other words, the breakthrough product or service that is the result of sheer genius alone is the exception. Great ideas that form the basis of new companies or that can make a hero of someone toiling in the corporate world are within reach of us all. "But wait," says O'Connor, "ideas are cheap." Just as important is doing something with them—a process that will turn the best ideas into something that people need. In other words, O'Connor argues convincingly, innovation can be systematically forced. The Map of Innovation is O'Connor's step-by-step approach to devising lucrative new products and services and bringing them to market, through a process that has proven itself time and again in many different industries. Too often, people trying to innovate focus on things that don't matter or waste their time trying to find answers to questions that can't be answered. O'Connor shows why the map of innovation centers on getting right the five make-or-break fundamentals: creating a large number of viable ideas; picking the right idea to pursue; creating a highly focused strategy to bring the idea to market; getting the money to fund the strategy; and hiring the best people. With Kevin O'Connor, the proof of the value of methodical innovation is in the pudding. He helped start companies that have employed thousands of people and created billions in shareholder value. Anyone can get lucky once, but for success to strike three times and to include many successful products, there has to be a method and map, and any company, big or small, working on any product or service can benefit from O'Connor's time-tested tactics.

how many people die every day: EVERYDAY SCIENCE NARAYAN CHANGDER, 2023-01-05
Note: Anyone can request the PDF version of this practice set/workbook by emailing me at cbsetnet4u@gmail.com. I will send you a PDF version of this workbook. This book has been designed for candidates preparing for various competitive examinations. It contains many objective questions specifically designed for different exams. Answer keys are provided at the end of each page. It will undoubtedly serve as the best preparation material for aspirants. This book is an engaging quiz eBook for all and offers something for everyone. This book will satisfy the curiosity of most students while also challenging their trivia skills and introducing them to new information. Use this invaluable book to test your subject-matter expertise. Multiple-choice exams are a common assessment method that all prospective candidates must be familiar with in today's academic environment. Although the majority of students are accustomed to this MCQ format, many are not well-versed in it. To achieve success in MCQ tests, quizzes, and trivia challenges, one requires test-taking techniques and skills in addition to subject knowledge. It also provides you with the skills and information you need to achieve a good score in challenging tests or competitive examinations. Whether you have studied the subject on your own, read for pleasure, or completed coursework, it will assess your knowledge and prepare you for competitive exams, quizzes, trivia, and more.

how many people die every day: Sex, Pot and Politics Lucie Pagé, 2018-09-19 Josephine's life takes a new turn when her husband, Robert—Bobby among close friends—is elected minister of finance. She soon realizes that the questionable relationships he has are becoming more frequent and that his values and principles are losing ground. To add to that, Josephine makes a discovery that scandalizes her: her youngest son smokes pot! First shocked, she then tries it herself and gets great pleasure out of it. Seeing that her marriage is going downhill since her husband is minister, this gives her an idea. With the complicity of her best friend, Lilly, and her domestic workers, Mamadou and Ping, she prepares a special meal that her husband will host in honor of several influential public personalities. If she wanted to spice up her everyday life, Josephine will have

reached her goal. But the discoveries she will make will change her life . . . and that of the planet.

how many people die every day: *THE NEW AND COMPLETE DICTIONARY OF THE GERMAN AND ENGLISH LANGUAGES* Johann Ebers, 1796

how many people die every day: *The Inner Life of the Dying Person* Allan Kellehear, 2014-06-03 This unique book recounts the experience of facing one's death solely from the dying person's point of view rather than from the perspective of caregivers, survivors, or rescuers. Such unmediated access challenges assumptions about the emotional and spiritual dimensions of dying, showing readers that—along with suffering, loss, anger, sadness, and fear—we can also feel courage, love, hope, reminiscence, transcendence, transformation, and even happiness as we die. A work that is at once psychological, sociological, and philosophical, this book brings together testimonies of those dying from terminal illness, old age, sudden injury or trauma, acts of war, and the consequences of natural disasters and terrorism. It also includes statements from individuals who are on death row, in death camps, or planning suicide. Each form of dying addressed highlights an important set of emotions and narratives that often eclipses stereotypical renderings of dying and reflects the numerous contexts in which this journey can occur outside of hospitals, nursing homes, and hospices. Chapters focus on common emotional themes linked to dying, expanding and challenging them through first-person accounts and analyses of relevant academic and clinical literature in psycho-oncology, palliative care, gerontology, military history, anthropology, sociology, cultural and religious studies, poetry, and fiction. The result is an all-encompassing investigation into an experience that will eventually include us all and is more surprising and profound than anyone can imagine.

how many people die every day: *Space, Place, and Violence* James A. Tyner, 2012-05-02 Direct, interpersonal violence is a pervasive, yet often mundane feature of our day-to-day lives; paradoxically, violence is both ordinary and extraordinary. Violence, in other words, is often hidden in plain sight. *Space, Place, and Violence* seeks to uncover that which is too apparent: to critically question both violent geographies and the geographies of violence. With a focus on direct violence, this book situates violent acts within the context of broader political and structural conditions. Violence, it is argued, is both a social and spatial practice. Adopting a geographic perspective, *Space, Place, and Violence* provides a critical reading of how violence takes place and also produces place. Specifically, four spatial vignettes – home, school, streets, and community – are introduced, designed so that students may think critically how 'race', sex, gender, and class inform violent geographies and geographies of violence.

how many people die every day: *The New and Complete Dictionary of the German and English Languages ; Composed Chiefly After the German Dictionaries of Mr. Adelung and of Mr. Schwan. Every German Word Being Rendered Into...* Elaborated by John Ebers Johann Ebers, 1796

how many people die every day: *Teaching Green -- The Elementary Years* Tim Grant, Gail Littlejohn, 2005-05-01 A complete resource for teaching green to young people from kindergarten through grade five.

how many people die every day: *Tobacco Control and Marketing* United States. Congress. House. Committee on Energy and Commerce. Subcommittee on Health and the Environment, 1990

how many people die every day: *The Map of Tiny Perfect Things* Lev Grossman, 2021-02-02 From #1 New York Times bestselling author Lev Grossman comes a magical-realist romance that turns the Groundhog Day premise inside-out and upside-down—coming soon to Amazon as a major motion picture. Mark is 17-years-old and trapped in a time loop, and that's just fine with him. It's summertime and he's spending this one infinitely repeating day reading his way through the town library. Then he discovers someone else in the loop with him: the brilliant, haunted Margaret. Together Mark and Margaret set out to find every wonderful, amazing, perfect thing that happens in that one day—a journey that will take them to the dark secret that waits at the very heart of their endless day. Thrilling, funny, and deeply romantic, this novella is perfect for fans of John Green, Nicola Yoon, and Jandy Nelson.

how many people die every day: *Life Business Spirit* Dr. Ashok Mohanty, The book Life

Business Spirit brings perspectives of spirit of life in managing the business. It collates various experiences with a touch of learning in childhood days and struggle to grow in life, how to inculcate values, principles of ethics as a fulcrum of life. The book also brings the dichotomy of being illiterate does not mean you don't have wisdom, anyone can manage but few only Lead. In addition to these, how greater purpose shapes our life, strategy for greatness, human instinct with happiness to perform are the part of the write-up. The book ends with how we can be a great human being with a caring attitude and being straightforward. There are few of examples related to author's life relevantly illustrated. Hope this book will help its readers at least one lesson to adopt sincerely.

how many people die every day: Global Issues beyond Sovereignty Maryann Cusimano Love, 2019-10-07 Other global issues books are a rather eclectic mash up of topics, headlines du jour, with an and now this! organizational scheme. The hot topics may have cooled by press time, and the presentation to students is disjointed, not clear. The approach is often a scare 'em and leave 'em presentation of a global horror show of problems, without clear arguments about the connections among the issues, or integrated discussions of solutions. In contrast, *Global Issues Beyond Sovereignty* provides a thesis and a common narrative throughout the issue chapters. The range of responses to manage global issues are compared and discussed throughout. Global problems move at internet speed; governments do not move so quickly. This creates gaps in what citizens expect the state to do, and what countries have the capacities to do. This paradox is a problem not only for weak or failing states; even the strongest states in the system struggle in how to effectively respond to global issues, from cybersecurity to environmental toxins. States cannot solve or manage trans-sovereign issues alone. The power of the private sector is growing (both legal and illegal, for profit and non-profit), while state power is flat or in some places declining. While private sector actors have means to impact transnational issues, they do not have a public mandate to do so. Countries increasingly must learn how to play well with others; this is easier said than done. Attempts to manage global issues flow through three channels: public sector responses, private sector responses, and mixed public-private partnerships. All three channels are explored throughout the book, uniting the issue chapters in a common discussion of challenges and responses. The conclusion presents lessons learned for theory and practice from managing global issues.

how many people die every day: The Naked Truth Lakita Garth, 2007-03-01 In a world where it seems like "everybody's doing it" how do you help students say no to premarital sex? Lakita Garth tells you how! As an internationally known abstinence advocate and sought-after speaker, she talks to more than 500,000 students a year about abstinence and sexuality. Here, she frankly, humorously and passionately shares her principles with teens for staying pure until marriage, while equipping them with the life skills necessary to be responsible and successful. Through her four-phase Decision Making Model, young people will understand the principles of self-control, self-discipline, delayed gratification and achieving their dreams. They'll be ready to establish healthy dating relationships and clearly defined boundaries for physical intimacy, while understanding and valuing marriage. The eight-session companion DVD, a leader's guide and student guides will make this resource perfect for small-group use.

how many people die every day: Mountain Top Life Daily Devotional 2024 Dr. D. K. Olukoya, Life-changing encounter with the God that answers by fire through a daily devotional. It's enriching and edifying. Daily bible. reading, morning and evening prayers, all with the coloration of advanced spiritual warfare. Watch your story change by the power of the Holy Spirit as you DAILY put this devotional to use.

how many people die every day: THE LAST DAYS ARE NOW! Home Owners vs. The Beast! Head-Of-Antichrist! & Home of Antichrists Bonnell Leon Patrick Known as Malachi! The Messenger, 2020-05-21 THE LAST DAYS ARE NOW! Home Owners vs. The Beast! Head-Of-Antichrist! & Home of Antichrists By: Bonnell Leon Patrick- Known as Malachi! The Messenger On this Earth, everyone has a reason for being. But after reading Patrick's positive outlook and inspiring words, he proves that it is very easy to see your reason for being once you know the truth. This book is like a guide on

how to get to heaven, which is not as easy as many of you think. The Messenger: Who told you that only God forgives? I tell you the truth; "If you don't forgive others for the wrong they do to you and others, our father in heaven will not forgive you. The only thing that any of us should really be talking about or reading about or bragging about is God, not Man! So telling you about my battle with the world shouldn't be any difference than your battle with the world! But if your battles is different! It's only because you're trying to serve both God and money. But wanting to play gods is what made this world and man, unacceptable to God! The bible say bow down to no man. Yesterday & the past Yesterday: there was only one God. Yesterday: God created man in his image. Yesterday: the church was a human body. Yesterday: God made a covenant with his people and made it his law. Yesterday: God's people gave ten percent for tithes and offerings to forgive their sin. Yesterday: God's people paid with the blood of animals, because they're innocent! Just like children who carry no sin. Yesterday: our Lord Jesus Christ was the last of the sacrifice. Yesterday: we played, laughed, cried, sing and prayed together, no matter how bad things got, love always kept us together. Yesterday: God freed us from slavery and took us to the land of milk and honey, so we can be fruitful and live free just like our creator, until the coming of Christ. He became out God and we became his people. Yesterday: we made a vow, "Not only to each other, but also to God! And not for a day, but till deaths do us part. A family that fears God, live only for God! This world is God enemies. Today & the future Today: the world claims many Today: we all became devils Today: the church is a bunch of buildings Today: Satan made a covenant with his people that changed God's law. Today: Satan trick the whole world into paying for sins Jesus already paid for. Today: Satan people still pay with money, because they chose money to be their God. They have you believing, a good life is a sinful life. Today: Satan will take another life! Everyday will be many sacrifices. Today: no one is faithful to God or each other. We lie, cheat, steal, rob and murder each other. Love today is a thing of the past. Today: we become slaves once again! To men's the world chose to play gods, male and female. God's people now living on land where they fight to be equal and free to worship other gods. Our Disobedience made us children of Satan? But Today: You say you hate me! And I rape you! Because you found someone older, younger, and better. The bible says the devil is never satisfied, and that he also a liar! So! Who are u? Our Action Speak Louder than Words, Yesterday and Today

how many people die every day: *Congressional Record* United States. Congress, 2001 The Congressional Record is the official record of the proceedings and debates of the United States Congress. It is published daily when Congress is in session. The Congressional Record began publication in 1873. Debates for sessions prior to 1873 are recorded in The Debates and Proceedings in the Congress of the United States (1789-1824), the Register of Debates in Congress (1824-1837), and the Congressional Globe (1833-1873)

how many people die every day: Deliver Us From Evil Ben O'Gwin, 2025-07-21 How does an atheist become an evangelist? How does a drug addict become a dedicated disciple of Jesus Christ? How do the hopeless find a Living Hope? In the pages of this book you will see one such story of the saving power of our Lord and Savior Jesus Christ. He is not only more than able but He is more than willing to bring about great deliverance in all of our lives! There is no such thing as a hopeless case for an almighty God!
